# **DETAILED ACTION**

#### **Priority**

Acknowledgment is made of applicant's claim for foreign priority under 35
 U.S.C. 119(a)-(d).

#### Information Disclosure Statement

2. The information disclosure statements submitted on 07/25/2003 have been considered by the Examiner and made of record in the application file.

#### **Drawings**

3. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Page 2

Art Unit: 2616

Claim 7 is rejected under 35 U.S.C 101 because the claimed invention is directed to non-statutory matter. A computer program per se in not patent eligible subject matter. The computer program product claimed is not combined with an appropriate computer readable medium capable of producing a useful, concrete and tangible result when used in a computer system. Therefore said computer program product does not fall within at least one of the four categories of patent eligible subject matter recited in 35 U.S.C. 101 (process, machine, manufacture, or composition of matter).

### Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 6. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Rao et al. (United States Patent Application Publication No.: US 2003/0219103 A1).

Consider claims 1-3 Rao et al. clearly show and disclose a lawful interception device including an SIP (Session Initiation Protocol) proxy server (figure 7 and paragraph [0079]) and an MGC (Media Gateway Controller) (figure 5 and paragraph

Application/Control Number: 10/626,596

Art Unit: 2616

[0019]) to detect information in the signaling information being transmitted between two IP (Internet Protocol) parties and to generate instructions out of the detected signaling information for instructing an RTP (Real-time Transport Protocol) proxy server to create channels to bypass a media stream to be intercepted via an intermediate storage medium (paragraph [0079]).

7. Claims 4-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Takeda et al. (United States Patent Application Publication No.: US 2003/0110292 A1).

Consider claim 4, Takeda et al. clearly show and disclose a method for performing SIP signaling for a media stream (figure 1 and paragraphs [0018]-[0021]), including the following steps: receiving an SIP invite message of a first IP party (paragraph [008]), adapting at least one connection parameter in the SDP (Session Description Protocol) of the received SIP invite message, transmitting the adapted SIP invite message to a second IP party, receiving an SIP response message of the second IP party, adapting at least one connection parameter in the SDP (Session Description Protocol) of the received SIP response message, transmitting the adapted SIP response message to the first IP party (figures 8-15 and 23 and paragraphs [0022]-[0025]).

Consider claim 5, and as applied to claim 4 above, Takeda et al. clearly show and disclose a method for performing SIP signaling for a media stream wherein at least

one connection parameter includes information about a bypass channel, an address, or

a port (figures 8-15 and paragraph [0092]).

Consider claim 6, and as applied to claim 4 above, Takeda et al. clearly show

and disclose a method for performing SIP signaling for a media stream wherein the

connection parameters sent to both IP parties differ from each other (different port

numbers as shown in figures 8-15).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to

Applicant's disclosure. Mohaban et al. (United States Patent No.: 7,209,473 B1)

disclose a method and apparatus for monitoring and processing voice over internet

protocol packets including lawful interception. Uusitalo et al. (United States Patent

Application Publication No.: US 2005/0063544 A1) disclose a method of lawful

interception of an IP packet between two or more terminals.

9. Any response to this Office Action should be faxed to (571) 273-8300 or mailed

to:

Commissioner for Patents P.O. Box 1450

Alexandria, VA 22313-1450

Hand-delivered responses should be brought to
